

APPLICATION INSTRUCTIONS

our tips

We recommend checking your graphics for size before applying. If there are any problems just get in touch. Once you are happy that your graphics are as ordered, the first job is to prepare the surface. Make sure the surface is completely clean, free of any dirt and dry. If the surface is cold to touch we recommend heating it gently with a hair dryer/heat gun. Your graphics won't stick to newly polished surfaces, so make sure you clean before applying or delay polishing. We would also avoid application in direct sunlight or extreme hot/cold conditions. Rain and wind are also unfavourable! Lastly, it can be useful to make some guides on the surface with masking tape so that you have something to line up to when applying.

□ STANDARD GRAPHICS

There will be three layers; the backing paper, the actual graphic and a layer of application tape. Start by SLOWLY and carefully peeling back the backing paper making sure all of the graphic sticks on the application tape. If you have trouble peeling this off, lay the graphic on a hard surface and firmly apply pressure to encourage the graphic to stick to the application tape. Once the backing paper is removed, hold the graphic up to the surface and align with any guides you have already made. Once you are happy with the positioning start smoothing down with the enclosed applicator, getting rid of any bubbles. Then, slowly remove the application tape leaving the graphic in place.

If the graphic peels off with the application tape, the surface may be too cold. Try applying a small amount of heat. If any air bubbles appear, you can pop these with a small pin or needed but they will disappear over time.

□ WITH CLEAR PROTECTIVE LAYER

There are three layers to these graphics; the backing paper, the actual graphic and a layer of clear protective vinyl. As the clear layer will remain on the graphics when applied, you can trim this before applying. Remove the backing paper and align the graphic with any guides you have already made. Once you are happy with the positioning, use the applicator included to smooth down and get rid of any bubbles. The clear protective layer should turn transparent when applied. If it still looks opaque in colour, apply a small amount of heat to cure the adhesive.

□ STRIPING TAPE

Simply peel the edge of the striping take away from the backing paper. Line with any guides you have made and slowly peel more of the backing paper once you are happy with the positioning. Use the applicator enclosed to get rid of any air bubbles. Continue this process until you have completed the striping line. You can also apply these using the wet method, fill a spray bottle with a water/washing up fluid mix and spray the surface. This will stop the tape sticking straight away enabling you time to play with the positioning. Use the applicator to squeeze out the liquid as you go and leave to dry.

□ CLEAR PROTECTIVE VINYL

Apply to areas you wish to protect. There are two layers; the backing paper and the clear vinyl. Remove the backing paper and use the applicator included, smooth down thoroughly as you go to get rid of any air bubbles. Once applied the vinyl should turn transparent. If it still looks opaque in colour gently apply some heat and the adhesive should cure.

Happy 10th Anniversary to us! ♥

STORAGE

We would suggest storing your graphics at room temperature, out of direct sunlight and extreme hot/cold temperatures.

REMOVAL

Vinyl graphics can be removed at any time, days or years, by gently applying heat with a hair dryer or heat gun. This will melt the adhesive and the vinyl should peel off. Be careful not to melt the surface in the process. Start off with a small amount of heat and work up. Once removed, clean the surface with a spirit or glue remove to remove any residue.

Pay consideration to the fading that may have occurred over time around the graphic, especially if they have been kept outside or subject to strong UV conditions, colour differences may be noticeable after removal.

PLEASE NOTE

These instructions are only guidelines and we can't be held responsible for graphics applied remotely. Whilst we can't offer refunds for used graphics, we will do our best to solve any problems you may have.

We always recommend checking the size and suitability of your graphics before applying. If you are unhappy with your order or have any problems or questions.
